INF273 – Assignment 3

Lukas Schramm 17th February 2022

1 Functions

Currently, I am maintaining the following functions.[1]

- load_problem: Given a path to a file, it reads the content of the file into a dictionary of information.
- feasibility_check: It takes a solution (list) and a problem dictionary and checks if the solution is feasible. If it is not feasible, it outputs the reason why. It does not check validity (since the aim
- cost_function: It takes a solution (list) and a problem dictionary and calculates the cost of the function. As feasibility_check it does not check if the original solution was valid.
- splitting_a_list_at_zeros: Helper function which splits a solution into vehicles and if needed a dummy vehicle.
- initial_solution: Generates an initial default solution to start with. This is always a solution where the dummy vehicle handles all calls.
- random_solution: Generates a random solution. The generator itself is quite bad in my view because I overtuned it a bit. It automatically gives one vehicle exactly one call and the rest goes to the dummy vehicle. That way I got solutions for file 3 and 4 but the solutions for all files are quite bad.[2]
- blind_random_search: Takes a problem and a number of iterations to find the best out of n random feasible solutions if any is found.
- blind_search_latex_generator: This function runs the blind_random_search and writes the data into LaTeXtables since I am obviously too lazy to do it myself.
- latex_add_line: Adds a new result line into an results table of this file.
- latex_replace_line: Change the optimal solution and its seed in that file.

  If there are any questions or nice recommendations to get a better structure, just send me a message.

[1] The green ones are changes or additions from the last assignment

[2] But since we do not need that random solution generator any longer I keep it like that.

2 Result tables

Table 1: Call_7_Vehicle_3

Method	Average objective	Best objective	Improvement (%)	Running time
Random search	2289893.35	2120884	34.59%	0.62s

Listing 1: Optimal solution call_7_vehicle_3

```
