## 1 Functions

Currently, I am maintaining the following functions.<sup>1</sup>

- load\_problem: Given a path to a file, it reads the content of the file into a dictionary of information.
- feasibility\_check: It takes a solution (list) and a problem dictionary and checks if the solution is feasible. If it is not feasible, it outputs the reason why. It does not check validity (since the aim
- cost\_function: It takes a solution (list) and a problem dictionary and calculates the cost of the function. As feasibility check it does not check if the original solution was valid.
- splitting\_a\_list\_at\_zeros: Helper function which splits a solution into vehicles and if needed a dummy vehicle.
- initial\_solution: Generates an initial default solution to start with. This is always a solution where the dummy vehicle handles all calls.
- random\_solution: Generates a random solution. The generator itself is quite bad in my view because I overtuned it a bit. It automatically gives one vehicle exactly one call and the rest goes to the dummy vehicle. That way I got solutions for file 3 and 4 but the solutions for all files are quite bad.<sup>2</sup>
- blind\_random\_search: Takes a problem and a number of iterations to find the best out of n random feasible solutions if any is found.
- blind\_search\_latex\_generator: This function runs the blind\_random\_search and writes the data into LATEXtables since I am obviously too lazy to do it myself.
- latex add line: Adds a new result line into an results table of this file.
- latex replace line: Change the optimal solution and its seed in that file.

If there are any questions or nice recommendations to get a better structure, just send me a message.

<sup>&</sup>lt;sup>1</sup>The green ones are changes or additions from the last assignment

<sup>&</sup>lt;sup>2</sup>But since we do not need that random solution generator any longer I keep it like that.

# 2 Result tables

Table 1: Call\_7\_Vehicle\_3

Method	Average objective	Best objective	Improvement (%)	Running time
Random search	2289893.35	2120884	34.59%	0.62s

## Listing 1: Optimal solution call\_7\_vehicle\_3
